

Research – Generic Investigational Med Record

Introduction

With Connect Care, research teams are required to order all their investigational medications in system. To do that, a record is created for each of the medications the same way it is created for standard of care medications.

The medication record for investigational drugs follow a specific nomenclature: [INV]_[generic drug name]_[“or”]_[“PLACEBO”]_[dosage form]_[strength/concentration]_[“/”]_[Study name OR Ethics ID]_[inventory].

Some examples:

- INV drugzumab OR placebo SC Injection 150mg / Zumab Study PHARMACY DISPENSED
- INV druglutide tablet 14mg / ProXXXXXX STUDY DISPENSED

A generic record called ‘INV Unable to Find Study Drug’ (Drug ID 7299999) has been created to be used on the cases where your drug has not yet been built or if your drug is not built correctly and you are waiting for the record to be fixed.

Important notes:

- The generic record is meant to be used as a temporary solution. Please ensure the build/fix of your medication has been submitted and that you use the appropriate record once it is available.
- There is a standard of care generic medication record, please ensure you are using the investigational version which starts with the prefix INV and says ‘Study Drug’.
- You must ensure you are following the nomenclature mentioned above when ordering the generic record. Please refer to the details below.

Patient reported medication

When using the ‘INV Unable to Find Study Drug’ record to add a ‘Patient-Reported’ medication, please ensure to type the name of the medication in the ‘instructions’ field. Please follow the established nomenclature.
